The GEMAS periodic table
OF AGRICULTURAL SOIL IN EUROPE

Clemens Reimann, Karl Fabian, Manfred Birke, Alecos Demetriades, Jörg Mitschelt, Ilse Schoeters and the GEMAS Project Team

Geophysical Monitoring of Agricultural soil groundwater (GEMAS) is a cooperative project of the European Group of the GeoGArt and Environment.

During 2000 and until early 2003, a total of 1,264 samples of agricultural topsoil were collected from 153 European states, covering an area of 0.155 million km² in 13 countries. All samples were analyzed for 51 chemical elements and 17 trace elements, and the results are presented in the GEMAS database (EMEP, 2004).
